Theme	Description	Codes	Example Interview Quotes
Theme 1: From Binary to Revocable Consent	This theme concerns participants' views on current photo-sharing controls as too limited or too extreme. It captures their preference for permission settings that can be adjusted both before and after sending, rather than fixed at the moment of disclosure.		"we have two options to send while sending a picture. One of them is sending a picture, like fully consenting it to be used in all of the purposes and the other one is only allowing it to be seen single time. So I think there is no middle option because the two of them are both extremes" Participant 1 "it gives me options both before and after sending. Right now, sharing a personal photo often feels like a one-way action, and once it is sent, control is really limited" Participant 4 "the fact that there isn't a time limit for me to do those changes is also really nice" P1 Participant 1
Theme 2: Bounded Control and Honest Limitations	This theme concerns how participants responded to the system's communication of its own limits, particularly around screenshots and saved copies. It captures the tension between valuing transparency and questioning the usefulness of controls that cannot offer complete protection.		"That may make the feature feel less powerful, but it also makes it more trustworthy and realistic" Participant 4 "It does make you feel honest, but then at the same time it makes you think, what's the point of sending it using these revocable permissions in the first place?" Participant 3 "the disclaimer is good, but I think like I didn't see it before until you pointed it out. So I think it'll be better if it was bigger" Participant 9
Theme 3: Revocation as Social Negotiation	This theme concerns how participants interpreted photo revocation as an interpersonal action rather than a purely technical one. It includes responses shaped by trust, fairness, awkwardness, and views on the request-access mechanism.		"I would feel offended, like, why did you, at first you sent this and what happened that made you erase this photo kind of?" Participant 8 "I could feel something like the sender doesn't trust me, depending on the circumstances" Participant 5 "the first thing that comes to my mind is when a group of friends go to a concert and one guy buys all the tickets and he sends his friends the pictures of the tickets, but he doesn't want them to use them before people enter... he could revoke access and then when his friends are at the entrance of a venue, then they could request access" Participant 5
Theme 4: Co-Subject Privacy as a Multi-Consent Problem	This theme concerns participants' reactions to giving depicted individuals a role in post-send control. It includes both support for the underlying privacy principle and concerns about feasibility, power balance, and how such control should be governed.		"I think even if you're not the one who took the picture..., if you're a subject of the picture, I think you should have the rights as to whether or not other people should have access to it" Participant 3 "I'd like to favour the co-subject in the photo to have the upper hand because they might not even been asked for permission from the sender. They might be naive, the sender might just be sending it to random people" Participant 7 "it's good for regulatory concerns in the future. Anything might happen after you send the photos. It's good to have a mechanism like where you can take a precaution" Participant 2
Theme 5: Interface Legibility and Permission Understandibility	This theme concerns how clearly the interface communicated permission states, feature logic, and available actions. It includes participant responses to wording, repetition, layout, and the balance between visibility and message-space efficiency.		"someone who has a hard time with the English language wouldn't really get it because you have it as a toggle where it says either disabled or allowed, where instead it should be like, would you like to enable view once... I don't have like a tick box after that" Participant 3 "it's quite wordy... the whole grey box in itself is covering up a lot of the chat" Participant 7 "I think it's very understandable. Just maybe, rather than type block or revoke, maybe you could have like a slider on the right side, which is just like an on and off button" Participant 5
