Categories	Codes	Quotes
Control Agency	Post-send control need	"when I send some more private pictures to my close friends or my in my closest relationships... when my status of my relationship changes, I want to go back and undo what I send" P1 "it is very useful because I mean our relationship with the people, with the person can change" P1 "I sometimes think about some photos I share before when I was younger, but you know there is nothing to do about them... Yes, it would be good if I could erase some of my photos or you know, maybe restrict the access for someone specific" P3 "100%. Like, if I send a picture, I wanted like systems where it's like the other person can't save it or screenshot it, or if I delete it from my side, then like delete it from their side as well, you know, if it's like something sensitive" P3 "There have been times when I wished I could stop someone from forwarding it or saving it, or continuing to view it later" P4 "limiting how other sides could use the photo would be better actually. By doing that, I will have less of a privacy concern regarding the leakage of the pictures" P5 "I've sent a photo and maybe I sent the wrong one or I want to edit it. Sometimes it won't allow me to do some of the things that I want, like edit it further or just delete it" P6 "once you put it out there, it's always out there. You can't reverse that. But if we had the control and the power to put more restrictions on the photos" P7 "I may sometimes send the wrong photo to the wrong person. So if something like that happens, I want to unsend or block their access to the photo" P9
Control Agency	Current apps limited	"we have two options to send while sending a picture. One of them is sending a picture, like fully consenting it to be used in all of the purposes and the other one is only allowing it to be seen single time. So I think there is no middle option because the two of them are both extremes" P2 "maybe a middle option like in which you can allow the recipient... for only specific time limit. It could be nice" P1 "I'm not sure what WhatsApp does not allow the photos to delete from the chat it is seen. You can only erase from yourself, but again, I'm not sure about this one" P2 "I don't think any particular app is doing anything good, like in terms of the privacy towards images, I think it's more towards the fact that it's iOS that's providing the systems for the apps to use" P3 "current apps do a decent job with basic tools like deleting messages or using view once features, but they do not do enough when it comes to long-term control after sharing" P4 "I can remember just two options, which is you can send a photo that will stay forever in the other device, or you can send a picture as a one-time viewing" P5 "the apps have a feature called View Once... But the one issue with that is obviously the photo is still displayed on the device. So you can always take another device and take a picture of the screen" P7 "this is more useful in Instagram, kind of, I think, because I don't know, who would tag people on a photo" P6
Control Agency	Increased control	"I would definitely feel more in control, especially with the first features... about putting restrictions while sending the image and then being able to modify it whenever I want, even though it's three months after I sent the image" P1 "definitely. I think I will choose this a lot... to change the access for my earlier photos" P2 "I can definitely say that it will help. You can pretty much do some possible actions and it looks safe" P2 "the one to be able to restrict the access after looks useful" P3 "having the ability to change certain permissions like after a time period makes sense because say you change your mind afterwards" P3 "instead of having to delete your message entirely and sending it again with the new options, like you can just change it here. It's better" P3 "it gives the sender a second chance. Sometimes people regret sharing something later, and current apps do not really help much in that situation" P4 "it gives me options both before and after sending. Right now, sharing a personal photo often feels like a one-way action, and once it is sent, control is really limited" P4 "I would think less and feel more secure when I'm sharing a photo, because I could customize, limit, and edit the things that could be done with the photo I have sent" P5 "if you were to send the photo to a person you trust, but if they broke your trust, you can just revoke their access to the photo so you can protect yourself" P9
Control Agency	Revision valued	"the fact that there isn't a time limit for me to do those changes is also really nice" P1 "you can also customise it so that maybe you can leave the timer there for that photo... you can customise it and be like, for this photo, you can maybe just add specific features there as opposed to just all of them at once" P6 "the fact that I can then later go on and play around with some permissions, prevent them from forwarding, from downloading, or altogether just revoke their photo access is something that gives the user a lot of control" P7 "it's good that WhatsApp has the deleting option after a few hours. But honestly, I'd like it to be infinitely allowed, like the time, so that I can delete photos like 3 months later" P4
Control Agency	Sender authority	"the sender should be the one who is in control... it's his privacy. So the sender should be the one who has the opportunity to change the settings" P2 "I think it's fair since the sender is the one who is responsible for what it's shared... the receiver might think what's happening now. But you can also request to see the photo right to the sender, so it looks fair enough" P3 "the sender is the person who puts it into the environment... I think sender have the right to do this. So, it's fair" P2 "I think it's fair because the sender is the one who has the rights to the image" P5 "I think it's fair because both sides can change their minds for the photo" P4 "you don't play the role of just sender or just recipient. When you're using an app like this, you're actively being both" P7
Understandibility & Clarity	Controls understood	"I can send it directly or with revocable permission, which I find really interesting because normally we don't have it" P1 "after sending the picture, the sender can change the settings we first established in the first scenario" P1 "they're obvious. The view once is already added in current WhatsApp... you can set forwarding, downloading permissions, or set a time limit" P2 "I can clearly see the same access permissions from the first scenario... it allows you to change the permission set earlier" P2 "you can clearly see under the photo what's possible and not... you actually see what has changed or not, or it totally revoked or not" P3 "it's pretty much understandable... but in terms of how each of the individual items in the grey dialogue connect to the statuses below, like that might take a bit of thinking" P3 "It feels like a privacy-focused step before sending" P6 "The most useful ones are view once, forwarding disabled, download disabled, and the time limits. Those all feel practical and easy to understand" P8 "the sender can still change permissions even after the photo has already been sent" P6
Understandibility & Clarity	Recipient-side state Clear	"this image is visible to me, but it's not allowed for me to forward to someone else. I can come back and review it later..." P7 "you can clearly see under the photo what's possible and not... you actually see what has changed or not, or it totally revoked or not" P3 "it also shows that you can request access again for the photo" P3 "it also seems to explain that screenshots, saved copies or previous viewing may still exist. So the message is not about deletion, but also about the limits of control" P4
Understandibility & Clarity	Terminology is confusing	"co-subject in photo. Can you please explain what is co-subject in photo?" P1 "the least used one, I think it would be the co-subject in photo. I mean, I can understand that it might be useful, but I found it a bit confusing" P6 "I think generally I like it. Only... the screenshots, saved copies or prior viewing may already exist. That the only the last phrase is a bit confusing for me" P7 "I don't really get what is the co-subject in the photo means? I don't get it" P2 "someone who has a hard time with the English language wouldn't really get it because you have it as a toggle where it says either disabled or allowed, where instead it should be like, would you like to enable view once... I don't have like a tick box after that" P1 "all of them, except for co-subject, I don't really get what that means. View once, forwarding, downloading, and time limit is something important to me" P5 "The one that feels less clear is the co-subject option, because I would need more explanation about how exactly how it works" P2 "the co-subject is a bit hard to understand, but if I understand correctly, I think it's like how tagging works on Instagram and other apps. Like, you can tag people that is on the picture so they can be aware of the photo" P6
Understandibility & Clarity	Feature logic initially confusing	"the recipient is forwarding the message, but with revocable permissions... it's actually just like the recipient becomes the sender in this scenario" P1 "I think it's something like deleting it, isn't it? So the photo will disappear" P2 "this might cause a bit of confusion when it comes to things for someone who hasn't seen this before... (on forwarding) P6 "would you require one person's revocation request to be granted or would you need everyone's? Or would you implement this technology to blur out people from the image?" P7 "view once disabled, then time limit is actually like very similar, I think" (perceives overlap between view-once and time limit) P8 "viewing it once and putting a time limit on the photo, I think they are similar in the sense that in both cases..." P9
Trust & Transparency	Transparency about limits is appreciated	"the screenshot is a big problem, I think. So, saying that explicitly is a good warning" P2 "I think everybody knows that in my age that you can't prevent the screenshot threat in WhatsApp. I think the only way is to restrict it by choosing to view once" P2 "It does make you feel honest, but then at the same time it makes you think, what's the point of sending it using these revocable permissions in the first place?" P3 "I actually think that warning is important because it makes the design feel honest" P4 "I would not assume that previously saved copies or screenshots would disappear" P4 "I still think the feature is worthwhile because reducing risk is valuable even if the protection is not perfect" P4 "This design does not solve everything, but it gives the sender more flexibility and makes sharing feel less risky" P4 "it removes a question mark from the users' minds" (on screenshot warning) P5 "this disclaimer there is perfectly placed. But one criticism as for the UI would be to potentially make it a little bit bigger and more clearer" P7 "the disclaimer is good, but I think like I didn't see it before until you pointed it out. So I think it'll be better if it was bigger" P9
Trust & Transparency	Limits weaken value	"when download is unallowed, it is a bit illogical that the screenshot is possible... because it's basically the same thing" P2 "if it's been forwarded to a lot of people and there's no, it's very likely that one of them are going to screenshot at any given time... if they screenshot, then there's nothing you can do about it" P3 "is there even like any use having this feature if people can just screenshot, you know, unless there's like a screenshot projection mechanism" P3 "if it's not too sensitive of an image, then I think if it was like an image where I was on the border of sending it, then I would probably send it with these features in place. But other than that, for like extremely sensitive stuff, like probably not" P3 "my main concern would still be screenshots, saved copies, or someone using another device to capture the image" P4 "there's the whole thing of having another device and taking physical photos of the screen. So that issue always exists" P7 "it is understandable, but the issue is when you send like 5 photos, for example, and every photo has these kind of, it would be very hard for the sender and hard for the receiver to swipe through the photos because there are these explanations. Like, swipe through the photos, you know, because there are these explanations." P8 "of course there is always the option that another person might take a photo of the phone" P6
Trust & Transparency	Platform Trust	"it would make me trust the platform more, because it genuinely shows the aim of the founders of the apps, that they want me to have the control over my own privacy, which is something that you cannot see everywhere in today's world" P1 "I will say more" (trusts the platform more) P3 "on platforms like WhatsApp, they say it's end-to-end encrypted, but then there's been sort of news cases where it's high profile individuals have had their like chats like leaked somehow. So I think is it really safe the stuff I'm sending... is it really a private conversation?" P3 "in terms of the platform, I think it would make no difference at all. I think it's up to who's using it and who's not using it... It doesn't make a difference to the platform, it just makes a difference to the senders and how they interact with the other senders" P5 "I think it would make me trust the platform more, especially if the limitations are explained honestly" P6 "it wouldn't make a difference... it's not really about the platform. The only thing is I would use it more for sending pictures" P5 "this would give me more trust for sure, to know that some of my personal information or things that I was involved in are not being sort of sent to other people" P6 "me personally, to be honest, I don't really share too much. So in terms of my trust, it wouldn't maybe play too much, it wouldn't change too much. But for the general population, I'm sure it'd have its benefits" P7 "it wouldn't change my trust in the platform, because most apps take sensitive information from people, so even though it's a good feature, I still don't trust them completely" P9
Socal Emotional Impact	Revocation feels acceptable	"it doesn't feel awkward, but maybe I would feel a bit more comfortable if those settings would be... maybe if I could just see them when I clicked on the picture, but not like as a part of the message" P2 "it's hard to tell without actually experiencing it" P1 "I would feel normal. It's up to the sender, whether or not they want me to see" P3 "But I could also understand it, especially if the photo was personal or sensitive" P4 "My reaction would depend a lot on the context and on how naturally the app explains the change" P4 "I think it's fair, to be honest, for both parties... as long as both parties have these type of privileges... these type of features" P6 "there's no harsh feelings, there's no hard feelings. I'm totally happy with how it works" P7 "even if they were to disable the access, since I can request it again, I wouldn't feel bad about it. It's a good way to ask them what happened" P9
Socal Emotional Impact	Revocation can feel negative	"This looks a bit, how can I say, a bit suspicious, I can say. So like, I will think what happened or is there a problem with this person... Maybe I can say annoyed" P2 "I would probably feel a little surprised or awkward at first, especially if I did not expect the sender to change their mind later" P4 "I could feel something like the sender doesn't trust me, depending on the circumstances" P5 "I would feel offended, like, why did you, at first you sent this and what happened that made you erase this photo kind of?" P6
Socal Emotional Impact	Request-access feature has mixed social value	"It is helpful, I guess, because it happened. I use this feature in email a lot. So why not on WhatsApp?" P1 "the sender wants the user to know that, hey, I want to send you an image, but then I want you to specifically be able to see it when I let you see it" P3 "it's better than like, say for example, the sender sends an image, and they delete it afterwards. Like, then the recipient would, if they didn't see it, then they wouldn't know that they received the image in the first place" P3 "the first thing that comes to my mind is when a group of friends go to a concert and one guy buys all the tickets and he sends his friends the pictures of the tickets, but he doesn't want them to use them before people enter... he could revoke access and then when his friends are at the entrance of a venue, then they could request access" P5 "it makes things more weird, kind of... he revoked it, then he revoked it for a reason. Why should I want it again?" (on request access) P6 "I think this is fair for the sender more" P6 "It is a good feature, but I feel like if the person you blocked the access to keeps spamming the request access option,... so they can't request it after a certain amount of time" P9
UI Design Feedback	Recipient feedback and visibility need tuning	"I think generally I like it. Only... the screenshots, saved copies or prior viewing may already exist. That the only the last phrase is a bit confusing for me" P1 "the colouring of it isn't exactly something that's too eye-catching. So both of them just look like they do the same thing to me. But like, I guess one is for send and one is sending it with revocable permissions" P3 "I think maybe even like an I button where you click it gives more information to the user like just to explain to them like what it does because not every single individual knows what they do" P3 "I feel like it's a bit redundant to have that grey dialogue box. I think if the user could just click the button where it says visible and then it like changes, and then you have like a button that says confirm like changes, then that would be more intuitive" P3 "the wording makes entire sense, it's just that I would prefer that it would have some like icons perhaps" P3 "all of it is really clear in terms of language use. It's just the time taken for me to look at these images and then try to figure out what they're doing was a bit long... that could just be easily alleviated using like different colour schemes, icons, like less wordy language" P3 "it feels neutral, yes" (on wording) P4 "it's quite nice to know the details behind it, but imagine there are like quite a few photos sent within the chat and it's this long sort of just list of photos with all of these features added to it. It can be kind of annoying to maybe scroll" P6 "what would be nice is, let's say the way you would do in WhatsApp, where you basically hold down the photo attachment itself and it brings up a whole list of things" P6
Forwarding/Redistribution	Forwarding should follow clear governance rules	"I think there should be a sort of hierarchy. For example, if the original sender of the image put download allowed, the recipient can forward it with download allowed or download unallowed" P2 "the only part which worries me is the contradictions, but other than that, it seems perfectly clear" P7 "there is no problem with the wording; it reads normal" P8 "you give the sender the ability to revoke access for every single individual, like person who's received the initial image. Like, including the forwarded ones" P3 "the revoke viewing for forwarding... I think that was a bit confusing. I think you should just don't let the first recipient forward it or just let them forward it. Instead of having it propagate through and then turn it off all of them" P3 "some people might find it a bit restrictive or unusual. So, it would need to be explained clearly to feel realistic" P4 "it's not only the persons you sent, but after it's getting forwarded, still you could revoke access from everyone if I understood correctly, which is providing another layer of security" P5 "it would probably make more sense if you just disable the forward button altogether, instead of..." P5
Co-subject Multi-Party Privacy	Co-subject protection is valuable	"someone from class is sending a private picture of me... this co-subject feature is allowing me to request revocation, which is actually really nice for my privacy" P2 "it's good for regulatory concerns in the future. Anything might happen after you send the photos. It's good to have a mechanism like where you can take a precaution" P2 "Pretty realistic, but it must be planned really carefully... maybe some kind of face recognition or some way to identify the co-subject might be better than just choosing that exists the co-subject" P3 "I'll say the co-subject stuff... it looks useful in this stage, but again, I'm not sure about the co-subject stuff" P2 "I think it's good idea. I think even if you're not the one who took the picture or the one who has it on their phone, if you're a subject of the picture, I think you should have the rights as to whether or not other people should have access to it" P3 "this co-subject one, I think that's something that might be really important to implement" P3 "it recognises that a photo can affect more than just the sender. If another person appears in the image, it makes sense that they may also want some say in what happens to it" P4 "the core subject, the last scenario. That seems to, upon further reflection, I'd say, yeah, probably the core subject one" (most useful) P6
Co-subject Multi-Party Privacy	Co-subject feature creates complexity and tension	"when I'm doing a private conversation, maybe I don't want them to learn that I sent their pictures to someone. And so there are many sideways to go and, you know, it's just not assuring enough" P2 "It's a nice idea, but only it would be a shame, for example, if a professor is sending an image to a group chat and she tags some students, and as a joke, if students revoke" P3 "it made me a bit uncomfortable that people have access when I tag them to modify or affect how other people view the image that I originally sent" P3 "my only concern is with the co-subject feature, but maybe it's because I'm not used to it" P3 "I think it's a hard question, but I might say both... But then what if both have opposite opinions on this situation?" P3 "I think it's both equal. If it's moderation, then it becomes a bit of an issue because there's like privacy involved. Like we don't want any external people to be seeing some of these images" P3 "if even one of them has an objection to the image being shown, then it shouldn't be viewable" P3 "it could make the whole system more complicated, so the design will need to stay simple enough that users do not get confused" P6 "The main challenge would be making it feel intuitive without making the overall experience too complicated" P4 "the picture should not be sent if either of them refuse it" P6 "why would the sender at the first point bother to tag the co-subject?" P6 "the co-subject one, even though I like the idea itself, it will be hard to implement it in the real world" P9
Co-subject Multi-Party Privacy	Co-subject governance and UI need refinement	"equal, equal, equal access and control maybe would be the best solution" P2 "the sender of the image is the one who has the image in the first place" P7 "I think it looks a bit like Instagram, which is I think it's also good for networking purposes" P1 "both the sender and the person in the photo should have meaningful control because both are affected in different ways" P6 "notifying the co-subject also seems very useful, but I think could be a little bit technically challenging. I don't know if that option is going to slow down the sending the photo process" P1 "there could be options like always accept from this person, or never accept from this person... you don't have to accept every time. You could give consent for any future pictures as well. That would maybe make the process faster" P6 "if there's like 5 people, six people inside this image, if only one person says no, then it can't be sent, it has to be unanimous" P6 "I'd like to favour the co-subject in the photo to have the upper hand because they might not even been asked for permission from the sender. They might be naive, the sender might just be sending it to random people" P7 "co-subjects should have the most control because he didn't send it in the first place, so he should be in charge" P6 "if the sender is trying to bully the co-subject, that would be pretty bad, so giving equal power to both would be the best course of action" P9
